MOHAMED HASSAIN AKBAR A

Cybersecurity Engineering Student | VAPT | Web Application Security | SOC Analyst

SUMMARY

Final-year Cyber Security Engineering student with foundational knowledge of network security, operating systems, cryptography, vulnerability assessment, and penetration testing. Completed cybersecurity training and an internship, with a strong interest in offensive security, security research, and vulnerability identification. Seeking an entry-level cybersecurity role to apply technical skills, contribute to security assessments, and develop practical expertise in identifying and mitigating security threats.

EDUCATION

Bachelor of Engineering in Computer Science Engineering (Cyber Security) 2023-2027
Coimbatore Institute of Engineering and Technology (CIET),
Coimbatore,Tamilnadu.

WORK EXPERIENCE

Ethical Hacking Intern | Hackup Technologies — Jun 2025 - Jul 2025

- Gained hands-on experience with Burp Suite, Nmap, Wireshark, and Kali Linux.
- Performed Vulnerability Assessment & Penetration Testing (VAPT) on web applications.
- Learned to identify OWASP Top 10 vulnerabilities and recommend remediation.
- Monitored network traffic and analyzed HTTP/HTTPS communications using Wireshark.

Cybersecurity Intern | Teachnook (IIT Roorkee Certified Program) — Feb 2024 - Mar 2024

- Learned computer fundamentals, computer architecture, and basic system operations.
- Gained foundational knowledge of networking, TCP/IP, and the OSI model.
- Studied Windows and Linux operating systems, including basic command-line operations.
- Learned cybersecurity fundamentals, encryption, decryption, and data security principles.

SPECIAL SKILLS

- Cybersecurity: Penetration Testing, VAPT, OWASP Top 10, Vulnerability Assessment, Threat Detection, Incident Response, IDS/IPS, SIEM, Firewall Security, CTF
- Security Tools: Burp Suite, Metasploit, Wireshark, Nmap, OpenVAS, Nikto, OWASP ZAP, Nuclei, Splunk, Kali Linux
- Programming & Development: Python, Bash, Git
- Networking: TCP/IP, OSI Model, DNS, DHCP, HTTP/HTTPS, Packet Analysis, Routing and Switching, Network Troubleshooting

Projects

Pay Gaurd – AI Fraud Detection App 2025-2026

Engineered an ensemble ML model combining Random Forest, Gradient Boosting and MLP with 42 features to detect UPI fraud.
Optimized feature engineering and provider whitelists to reduce false positives.

SaaS Web Security Scanner march - Sep 2025

Developed a multi-engine vulnerability scanning platform integrating OWASP ZAP, Nikto, and Nuclei with REST API orchestration and automated VAPT report generation.

TrafficShield – HTTP Anomaly Detection 2024-2025

Implemented a real-time HTTP traffic monitoring system to detect suspicious patterns using IDS/IPS principles.
